“

At DNAPLUS, our mission is to empower patients through advanced personalized healthcare. By integrating Polygenic Risk Scores with established clinical and lifestyle risk factors, we significantly improve the accuracy of disease risk prediction.

This enhanced precision enables more individualized screening and prevention strategies, supporting earlier intervention and better health outcomes.

Furthermore, our tests help identify individuals at elevated risk, empowering them to make targeted lifestyle and medical decisions.

KNOW YOUR RISK

EMPOWER YOUR PERSONALIZED PREVENTION

HOW DOES IT WORK?

01

SAMPLE COLLECTION

Provide your saliva sample using our CE-certified, non-invasive collection kit.

02

POLYGENIC RISK SCORE ANALYSIS

Your genetic data is analyzed to calculate a personalized genetic risk score.

03

PERSONALIZED RISK ASSESSMENT

Your individual risk is calculated using genetic and non-genetic factors.

04

INDIVIDUAL REPORTING

A personalized report with clear insights into individual disease risk is generated.

05

PERSONAL COUNSELLING

Access personalized counselling to discuss your results with your physician.

WHY IS TESTING IMPORTANT?

Many common diseases are influenced by both genetic predisposition and non-genetic risk factors. Risk modeling integrates these components to provide a personalized and clinically meaningful risk estimate, helping to identify elevated risk early and support targeted prevention and informed health decisions.

EARLY DETECTION CAN SAVE YOUR LIFE

Early risk identification supports timely prevention and personalized health management. Knowing your risk helps determine appropriate screening and follow-up strategies, as well as targeted lifestyle adjustments.

Identifying elevated risk at an early stage supports timely prevention, personalized monitoring, and informed health decisions.

WHAT DO WE TEST?

YOUR ABSOLUTE LIFETIME DISEASE RISK

The final result of our analysis is an individualized risk estimate derived from validated genetic data and, where available, relevant non-genetic risk factors. The report summarizes your risk profile and outlines tailored prevention and medical follow-up strategies.

WHAT ARE YOUR BENEFITS?

PRECISE RESULTS

By integrating genetic and non-genetic factors, you receive an accurate evaluation of your personalized absolute lifetime disease risk.

OPTIMIZE SCREENING

Understanding your risk enables you to tailor preventive measures, adjust screening frequency, and make informed lifestyle changes.

IMPROVE PREVENTION

Proactively reduce your disease risk with personalized lifestyle modifications and preventive strategies based on your unique risk profile.
